Fossils: History in Contention

April 10th at 7PM

Description: Secular geologists say there has been no global flood as described in the Bible, but vast quantities of fossils provide a monumental testimony to this event and God's recent judgment of humankind. This presentation provides an introduction to Creation Geology and a Biblical characterization of the fossil record, which is alternatively used to support the theory of evolution.

Numerous examples of fossils are provided that defy conventional explanation, and instead are more consistent with rapid burial and petrification. In addition, an explanation of fossil sorting is provided that is consistent with the mechanisms active during the Biblical deluge. When the evidence is examined, we see that the fossil record has been misinterpreted by secular geologists who deliberately ignore that the "world was deluged with water and perished" (2 Peter 3:3-6).

About the Speaker: Chris Ashcraft is high school science teacher at Cedar Park Christian Schools. He obtained a Bachelor of Science in biology from Wayland Baptist University in 1989, a Master of Science in biology from Texas Tech University in 1996, a Master of Education from the University of Washington in 2008, and a Master in Teaching Math and Science from Seattle Pacific University in 2012.

The Apologetics Symposium will occur on the 3rd Thursday each month, and feature multimedia presentations by speakers, scientists, and authors who are dedicated to defending the Bible against naturalism. The events are free and open to the public and generally suitable for ages 11 and up. Educational resources will be available for sale from the NW Creation Network.
