# Reasons to Believe in a Young Earth

## **Dr. Phil Fernandes**

Pastor of Trinity Bible Fellowship, Teacher at Crosspoint High School, Professor of Apologetics and Religion, Veritas International Seminary

www.philfernandes.org

Should we interpret Genesis 1-11 literally? (a literal six-day creation)

Should Christians believe in a young earth and a global flood?

#### **Francis Collins**

Former head of NIH & the Human Genome Project

He leads the Biologos movement--He believes in theistic evolution & denies a historical Adam & Eve; He believes Genesis 1-11 is mythology

## **Hugh Ross**

President of Reasons to Believe; Rejects human evolution

But, he promotes the Big Bang & believes in an old earth (13 billion years old)

He incorrectly thinks he is literally interpreting Genesis 1-11

# William Lane Craig's Quest for the Historical Adam

He argues for a historical Adam and Eve, but interprets Genesis 1-11 as mytho-historical

Adam and Eve evolved from non-human parents

Craig denies Adam was created from the ground & Eve from his side

No literal serpent or forbidden fruit

Believes in an old earth & theistic evolution

He denies a literal 6 day creation (though he admits a literal interpretation of Genesis 1-11 teaches 6 day creation & a global flood)

Tree of life & tree of forbidden fruit are metaphors

Cherubim, 4 rivers in Eden, & long life spans are symbolic

Global flood & Tower of Babel are mythological

Craig admits Jesus and Paul believed in a historical Adam & Eve

But, he believes Young Earth Creationism is "wildly implausible"

Craig believes we should not take Genesis 1-11 literally

He accepts contemporary evolutionary "science"

Craig rejects interpreting Genesis 1-11 in a literal way

Still, Adam and Eve were the 1st historical humans

But, much of (not all of) Genesis 1-11 is mythological

Hence, Craig classifies Genesis 1-11 as "mytho-historical"

He believes Adam & Eve evolved from pre-humans

He seems to favor the Documentary Hypothesis

Craig respects secular scientific speculation more than a literal interpretation of Genesis 1-

11; Adam & Eve were the first humans—they evolved from sub-humans 750,000 years

ago; Craig classifies Adam & Eve as Heidelbergensis

They were the ancestors of Neanderthals & other humans

Adam & Eve were the first to bear the image of God

There was physical death before the fall, but not spiritual death, for humans

# **Age of the Earth Discussion**

Should we take Genesis 1-11 literally? Should we be young earth creationists?

**Point** #1—A Debate Between Brothers

There are Christians who love the Lord who are in both the young earth & old earth camps.

But, the Bible is the final authority—it is the Word of God

We must not white-wash over biblical passages

**Point #2**—God called His creation "very good" (Genesis 1:31)

If old earth creationism is true, then there already existed billions of fossils of dead animals; Old earth creationism is wasteful

Old earth creationism does great damage to the traditional response to the problem of evil & suffering (blamed on man's abuse of free will)

Point #3--The Fall led to a cursed creation with animal & human suffering & death

Genesis 3; Romans 8; 1 Corinthians 15

**Point #4**—the order of God's creation work (Genesis One)

Old Earthers reverse the order on each point:

Earth before sun & stars; Light before the sun; Land vegetation before the sun

Birds before reptiles; No meat-eaters before the Fall; No thorns before the Fall

Point #5—Consistent Old Earthers deny the Global Flood

Genesis 6-9 describes a global flood

A continual downfall of 40 days

"Mabbul" used only of Noah's flood

The enormous size of the ark

The waters covered all the mountains

Every human & every land animal died

The Ark rested on a mountain top

Noah's family could not leave the ark for over a year

God promised to never again flood the entire earth

**Point** #6—the historical view of the church

Until 1800 ad, the church believed in a young earth with under 6,000 years of history Early church, reformers

Only when scientific consensus began to promote an old earth did many Christian thinkers begin to reinterpret Genesis 1-11

**Point** #7—God's Word is the final authority, not scientific consensus

Scientific knowledge is tentative; God's Word is inerrant. Why did it take the church 1800 years to find out what Genesis 1 "really" meant?

If God wanted to tell us about a literal six-day creation & a global flood, could He have been any clearer?

## Eisegesis vs. Exegesis

<u>Eisegesis</u> = bringing into the text something the Word of God does not really say

<u>Exegesis</u> = bringing out the text exactly what the Bible says (good hermeneutic)

#### Conclusion

There is no reason to interpret Genesis 1 to 11 metaphorically

The first 5 books of the Bible are historical books, not mythology

Therefore, the church should not change the way it interprets Genesis 1-11

We should not give in to the false wisdom of man (Colossians 2:8)
